Projects

Current Projects

New antifungal compounds

[Details](#)

Former Projects

Cryo-stress of filamentous fungi

[Details](#)

The hypoxic (low-oxygen) response of the pathogenic mould *Aspergillus fumigatus* and its relevance to pathogenicity

[Details](#)

Identification of immunogenic components of *Aspergillus fumigatus* for vaccine development

[Details](#)

Investigation of the stress response system of *A. fumigatus* by redox proteomics

[Details](#)

The role of Apolipoprotein E in the innate immune system

[Details](#)
